

No SV 545

Poona, Dt. 8th Oct 1946

CIRCULAR

It is observed that there is much confusion and misunderstanding regarding the interpretation and application of this office circular Nos SV 545 dated 21 8 40, 15 11 44, and this office circular No SV 73 dt. 6 5 37. To remedy this the following instructions should be followed

In case of city surveys already in existence Whenever recalculation of area is necessary, the calculation should be done to the nearest square feet as directed in the this office circular No SV 545 dated 21 8 40 but if the difference between the old recorded area and the new area is within the permissible limits of 5% the recorded area should not be altered In case of subdivisions for example, the area of the subdivisions should be calculated by vaslowar method correct to a square feet and if the total area of the subdivisions does not exceed the above limit, the difference should be proportionately distributed among the subdivisions

In case of new and revision city surveys, however to the order issued in this office No SV 545 dated 21 8 40 should be rigidly followed
