
No SV 673 of 1937

Via, Poona, 30th April, 1937

CIRCULAR

It has been noticed that Government open plots are at present, numbered serially in the city survey maps, without any distinguishing mark, along with other city survey properties, and so it is not possible to distinguish them from the privately owned open plots by looking at the map alone. It is, therefore, hereby directed that the letter 'G' should be inserted for all Government plots in red ink, both in the review and correction copies, with the help of the Register of Government plots prescribed in this office No SV 673, dated 29th July 1936 so that it will be printed in the next prints of the sheets and the difficulty noticed above will disappear.

The District Inspector should see at the time of his next inspection of each City Survey Office that this entry has been made by the Maintenance Surveyor Correctly in respect of all the Government plots

DIRECTOR OF LAND RECORDS

No SV 175 of 1937

Via, Poona, 5th May 1937

CIRCULAR

Subject : N.A. areas calculation of to the nearest 1/4 anna.

It has come to the notice of the Director of Land Records that the procedure following in calculating the area of N.A. plots to the nearest 1/4 anna (vide this office Circular No SV. 175, dated 10 11 1917) is not uniform and hence difficulty is felt in calculating N.A. area to the nearest 1/4 anna. It is, therefore, ordered that in all N.A. cases the following procedure should be followed

(1) The N.A. plots should be measured by PT on a large scale of 1 1/4 chains to an inch (except when the N.A. area is large, where the scale may be reduced to 2 1/2 chains to an inch)

(2) Actual Bandh maps of the area forming the N.A. area should be taken in the field and noted on the PT sheet, and the area of the N.A. plots calculated to the nearest 1/4 anna by base-lines and offsets scaled off from the map, the Band maps serving as a check for the scaled off measurements
