

No SV 545

Poona, Date 7th May 1956

CIRCULAR

In cases of confirmation of boundaries in CTS areas, no plan is prepared when there is no change in the wahiwat boundaries (vide SC & DLR's No SV 715 dated 23/8/38) only sketches showing the measurements recorded in the field are, prepared in such cases as per orders in the SC & DLRs No even dated 15/11/54 A question has, therefore, arisen whether a certified copy of such sketches could be granted when the parties apply for it

2 As the parties are entitled to have a certified copy of the plan if they want it whenever measurement is done, for confirmation of boundaries, the MSs should hereafter prepare scale drawn plans in all such cases showing thereon the actual measurements taken, irrespective of whether there is change in boundary or not, and certified copy of the plan together with the recorded field measurement noted thereon, should be granted to the parties, whenever they apply for it In cases, the recorded measurements do not tally with the scaled off measurements or the measurements recorded, if any on the original sheets the presumption is that either the boundaries have changed or the old measurements recorded are erroneous If the field conditions give satisfactory proof that no change in boundary has occurred, then the old measurement recorded would be incorrect and should be corrected with the approval of the SLR before finalising the plan and granting the certified copy Differences between the scaled off measurement and actual measurement within permissible limits/ according to particular scale adopted should be ignored (e.g scaled off measurement 21' and actual measurement 20'-6' when the scale adopted is 40 to an inch) The question of adjusting the actual measurement does not arise in such cases
